BEATA CLASP®

Medical Line Organizer

The Beata Clasp is a flexible, antimicrobial organization device designed to attach directly to bedrails, IV poles, wheelchair arms, or carts. It securely holds medical tubing, lines, and drains in place within its grooves, preventing issues such as impingement, dislodging, and medical line errors (MLE). This simple tool minimizes the risk of adverse incidents related to tubing by keeping it separated and neatly arranged. By preventing tubing from touching the floor, the Beata Clasp reduces contamination risks for patients and enhances safety for caregivers and visitors.
