

PEDAL BAND

VASCULAR COMPRESSION DEVICE

The TZ Medical Pedal Band is a versatile mechanical compression device designed to deliver controlled, consistent pressure after vascular access procedures. Featuring an intuitive turn-dial mechanism and a soft silicone compression pad, the Pedal Band allows clinicians to fine-tune the amount of pressure applied, helping to support hemostasis while maintaining patient comfort.

Engineered for multi-application use, the Pedal Band adapts seamlessly to a variety of access points—including pedal and tibial vascular sites. Its flexible design includes two adjustable straps, enabling the device to be positioned in multiple orientations to accommodate different anatomical locations and procedural needs.

Features

- Versatile design allows the device to be positioned in multiple orientations for pedal and tibial vascular access
- Two adjustable straps to accommodate a variety of anatomical locations
- Completely transparent viewing window for optimal visualization
- Mechanical turn-dial and silicone pad enables fine-tuning of pressure
- No syringe required

Item Number	Description	UOM
PHD-0015	Pedal Hemostasis Device	Box of 10
