COMFORT CRADLE

The TZ Medical Comfort Cradle is a versatile product that aids both the patient and the operator during procedures. The cradle's extended width improves comfort, making long procedures more tolerable for the patient.

The dimensions of the Comfort Cradle provide superior support and comfort during vascular procedures compared to smaller and less robust arm boards.

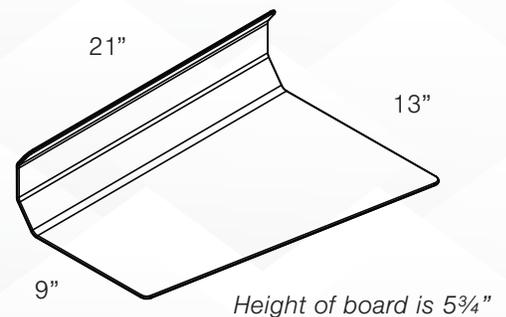

The Comfort Cradle also offers the ability to position the Flat Detector (or Image Intensifier) in direct contact with the patient in all views, providing superior image quality.

Features

- Patient is more accessible to the physician
- Extra-wide dimensions for added comfort
- Durable polycarbonate construction
- Superior image quality
- Comes with a six-month warranty
